

QA Report

Date: 14.5.2026

Tester: Djellza Hamza

App: Cloudya Lite

Testing type: Exploratory

Summary:

7 issues found during exploratory testing.

2 High severity, 4 Medium severity, 1 Low.

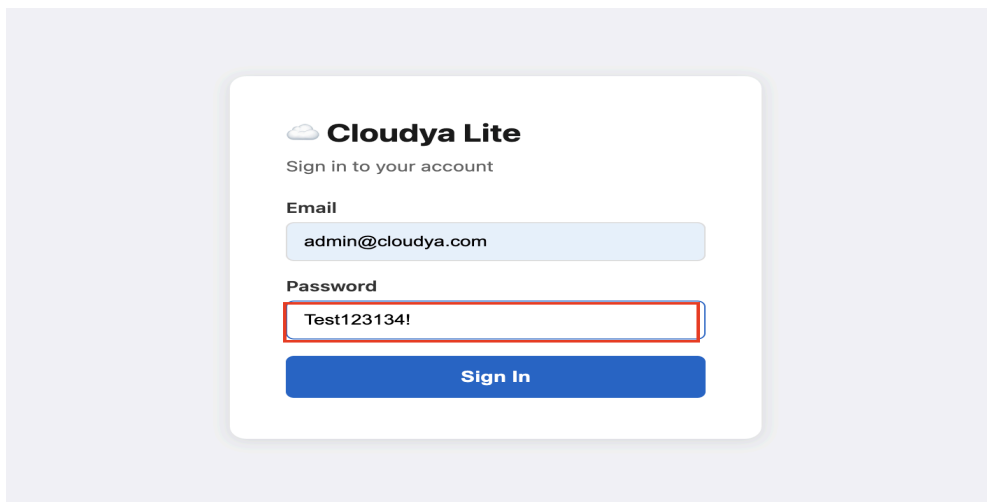

Issues:

ID	Title	Severity
Bug-001	Password displayed in plain text	Medium
Bug-002	API accessible without authentication	High
Bug-003	Login returns 200 for failed auth	Medium
Bug-004	Search doesn't handle special characters	Medium
Bug-005	Logout doesnt clear session properly	High
Bug-006	UI elements cut off on multiple viewports	Medium
Bug-007	URL does not update on navigation	Low
Bug-008	Login API response exposes plain text password	High

Bug-001: Password field displays text in plain text

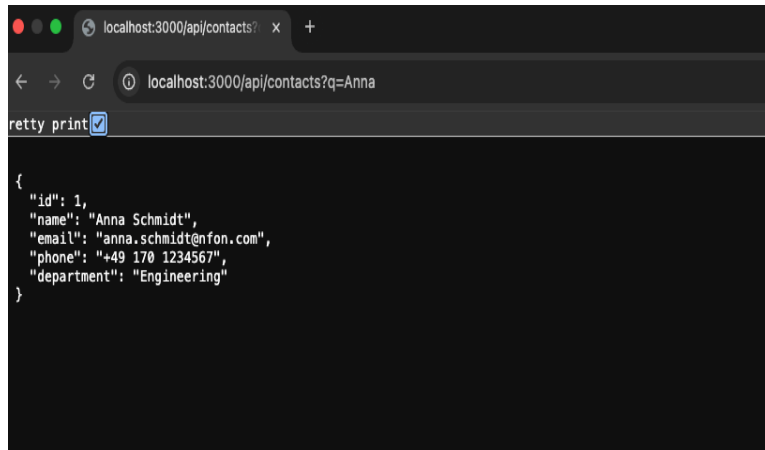

- Severity: Medium
- Environment:
 - a. Browser: Chrome

- b. OS: macOS
- Steps to reproduce:
 - a. Go to <http://localhost:3000>
 - b. Click the password field
 - c. Type any password
- Expected result: Characters are masked
- Actual result: Password is fully visible
- Possible cause: Input field missing type="password" attribute
- Screenshot:

Bug-002: Contact search API accessible without authentication

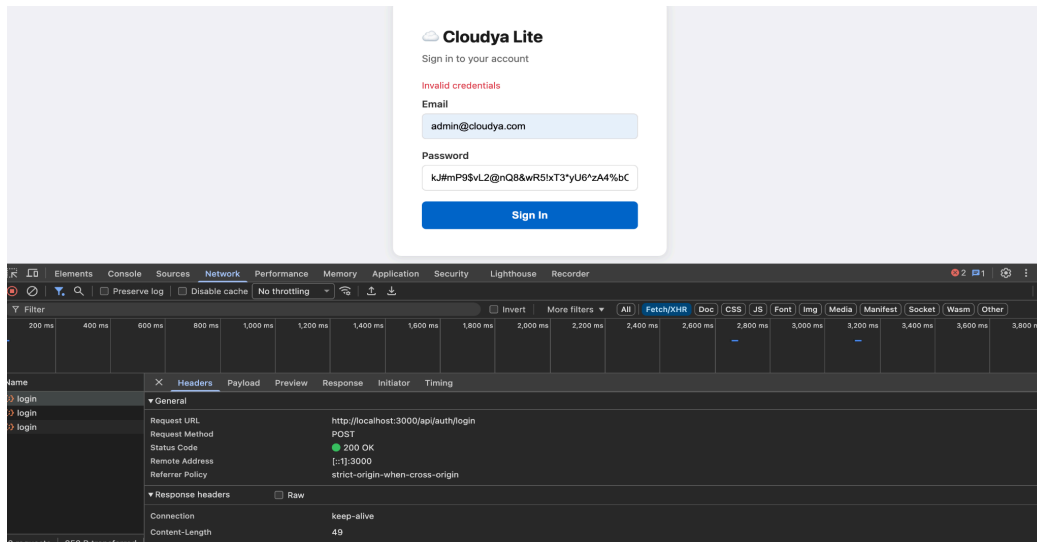

- Severity: High
- Environment:
 - a. Browser: Chrome
 - b. OS: macOS
- Steps to reproduce:
 - a. Open a new browser window without logging in
 - b. Navigate directly to: <http://localhost:3000/api/contacts?q=Anna>
- Expected result: 401 Unauthorized
- Actual result: Returns full contact data including name, email, phone and department
- Possible cause: No authentication middleware
- Screenshot:

Bug-003: Login API returns 200 for failed authentication

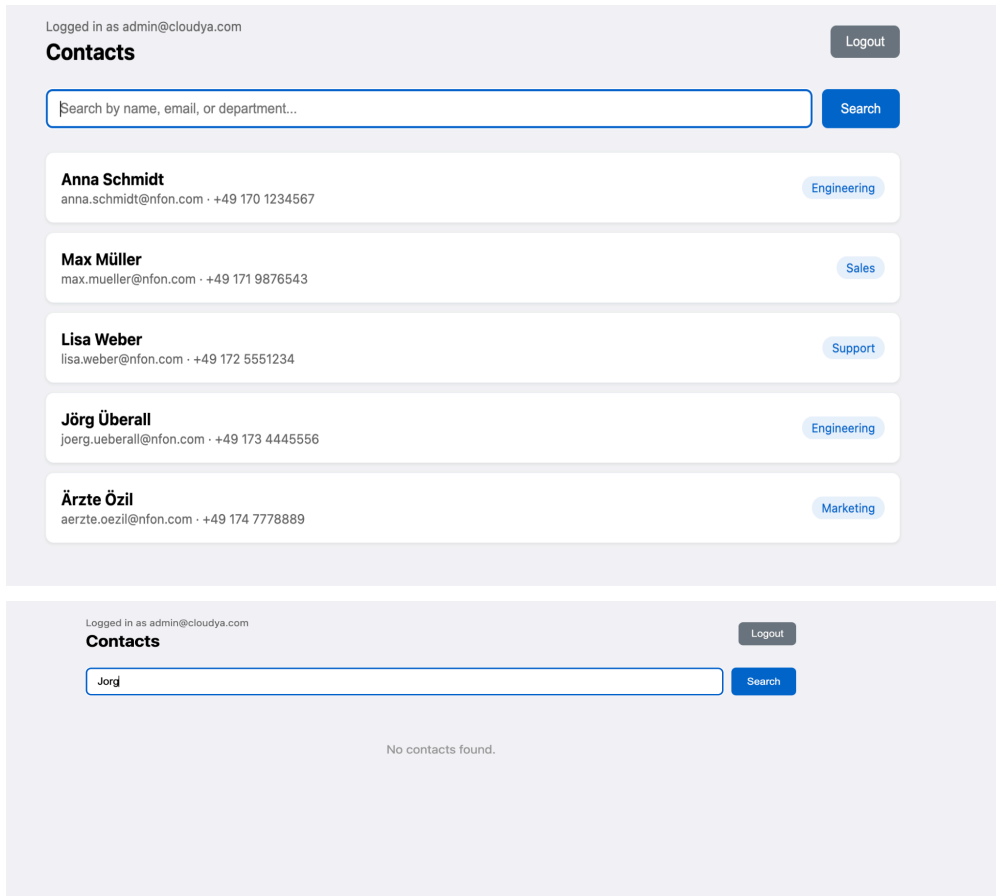

- Severity: Medium
- Environment:
 - a. Browser: Chrome
 - b. OS: macOS
- Steps to reproduce:
 - a. Open DevTools Network tab
 - b. Enter email admin@cloudya.com
 - c. Enter a wrong password, and click sign in
 - d. Check network response
- Expected result: 401 Unauthorized
- Actual result: 200 with body `{"success":false,"message":"Invalid credentials"}`
- Possible cause: Backend always returns 200 instead of handling http codes properly

- Screenshot:

Bug-004: Search does not handle special characters and diacritics

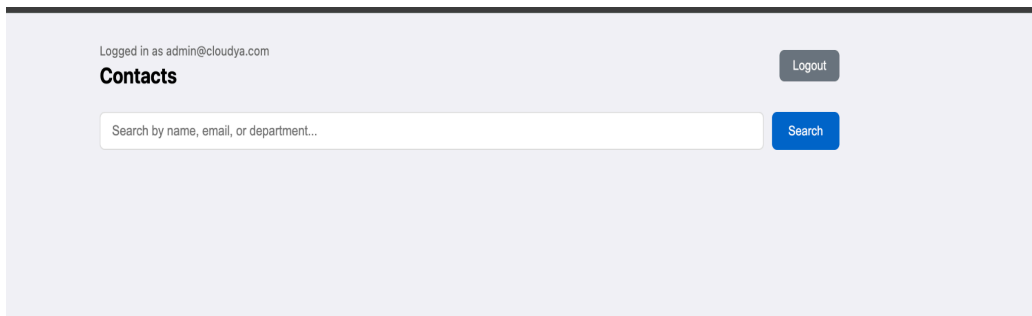

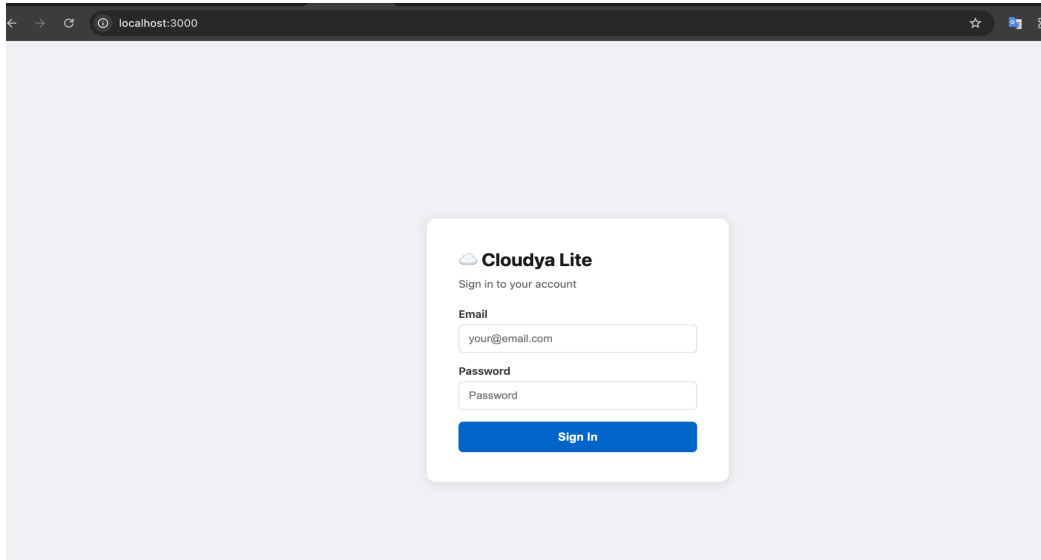

- Severity: Medium
- Environment:
 - a. Browser: Chrome
 - b. OS: macOS
- Steps to reproduce:
 - a. Login as an admin
 - b. Search for 'Jorg'(without umlaut)
 - c. Click search
- Expected: Returns "Jörg Überall"
- Actual result: 'No contacts found'
- Possible cause: No unicode normalisation applied
- Impact: Users cannot find contacts with special characters unless they know exact spelling
- Screenshot:

Bug-005: Logout does not properly clear session

- Severity: High (security risk)
- Environment:
 - a. Browser: Chrome
 - b. OS: macOS
- Steps to reproduce:
 - a. Login as an admin
 - b. Click logout button
 - c. Verify redirect to login page

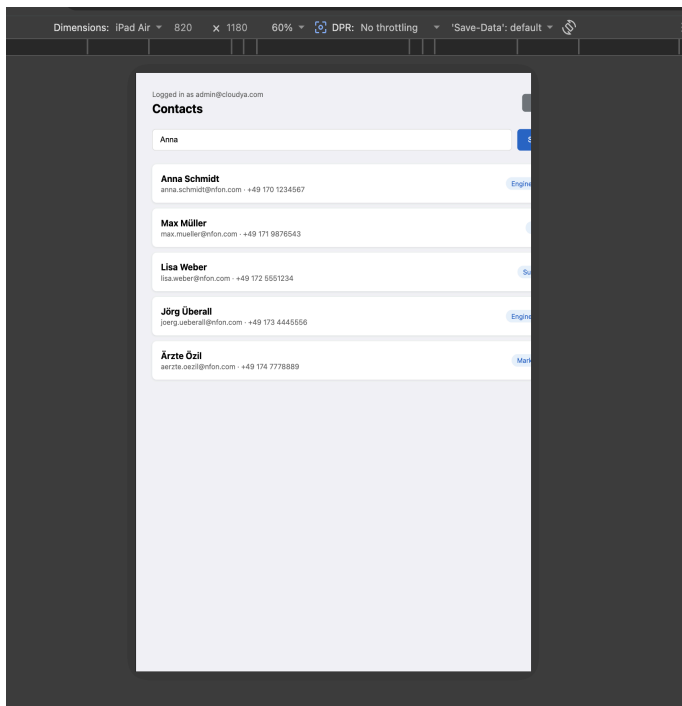

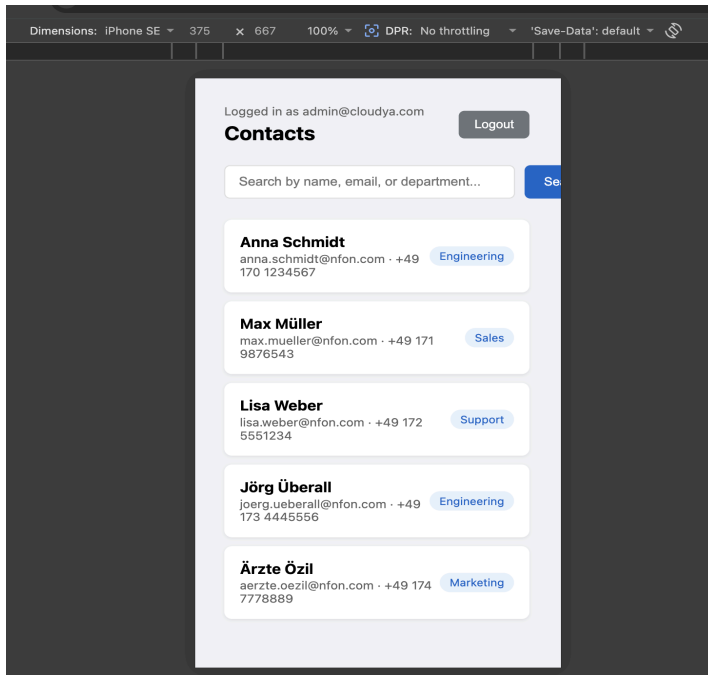

- d. Press refresh
- Expected: Login page remains
- Actual result: Contacts page loads showing "Logged in as admin@cloudya.com" with no contacts visible
- Possible cause: Token remains valid, not sure

Bug-006: UI elements cut off on small viewports

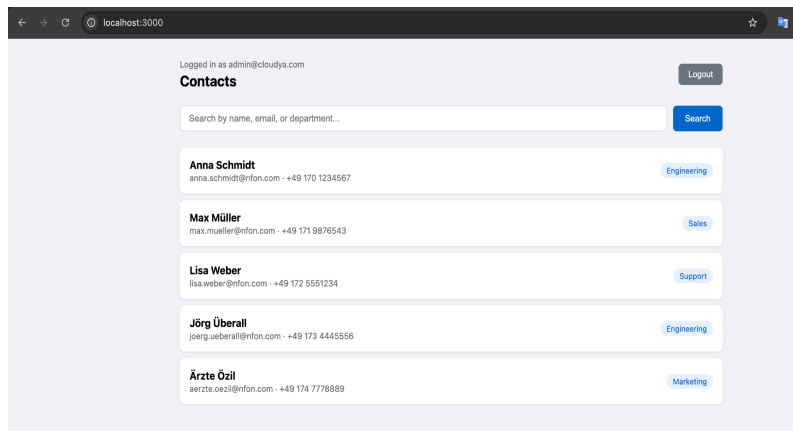

- Severity: Medium
- Environment: iPhone SE (375px), iPad Air (820px), Chrome 146, DevTools emulation
- Steps to reproduce:
 - a. Open DevTools
 - b. Switch to iPhone SE (375px) or iPad Air (820px)
 - c. Log in and navigate to contacts page
- Expected: All UI elements fully visible and usable

- Actual result: Search button shows only "Sea", Logout button partially hidden, department badges slightly clipped
- Possible cause: No responsive design implemented
- Screenshot:

Bug-007: URL does not update when navigating between pages

- Severity: Low
- Environment:
 - a. Browser: Chrome
 - b. OS: macOS
- Steps to reproduce:
 - a. Go to <http://localhost:3000>
 - b. Log in with valid credentials
 - c. Observe URL on contacts page
- Expected: URL updates to reflect current page e.g. localhost:3000/contacts
- Actual: URL remains localhost:3000 on both login and contacts page
- Possible cause: No proper routing

Bug-008: Login API response exposes plain text password

/Note: Tested on localhost but the issue exists at code level the server returns the password field regardless of environment. This would be a critical issue in production.

- Severity: High
- Environment:
 - a. Browser: Chrome
 - b. OS: macOS
- Steps to reproduce:
 - a. Open DevTools network tab

- b. Log in with valid credentials
- c. Check response tab of login request
- Expected: Response contains token only, password should never be returned
- Actual: Response includes the user's plain text password in the body:

```
{
  "success": true,
  "token": "tok_8kpsex90dwb",
  "user": {
    "email": "admin@cloudya.com",
    "password": "Test1234!"
  }
}
```

UI/UX Improvements and Suggestions

1. No role-based access control (RBAC) both user roles, admin and user, have identical access to all contacts and features. No difference between user roles.
Suggestion: Implement role based permissions so admin users have elevated access (crud), that regular users can't have.
2. Search is case-sensitive, when searching e.g., for departments, e.g., 'engineering' returns no results, and 'Engineering' returns 2 contacts.
Suggestion: Implement case-insensitive search. Most users type in lowercase naturally (including myself)
3. No real time search, users must click the search button or press enter to get results.
Suggestion: Add live search as user types (debounced) for a faster experience
4. No input length validation: Password fields accept unlimited characters (I tried 500 chars) and send them all to the API.
Suggestion: Add some max length to limit input to more reasonable length, to reduce unnecessary server load.
5. No pagination or contact count -> all contacts load at once with no indication of total number.

6. Inconsistent button styling: Logout button is gray, search button is blue, and size is different.

Suggestion: Align button styles to a consistent design.
